

INFECTIONS IN SURGERY GLOBAL WEBINAR

21-22 November 2022

(Preliminary program)

<https://www.infectionglobalwebinar.org/>

The webinar meeting is free of charge and completely online, enabling participation from all over the world. Over the course of the two-day webinar meeting more than 100 experts will discuss the main aspects of the prevention and management of infections across the surgical pathway. The webinar will be held during the World Antimicrobial Awareness Week. It aims to increase awareness of antimicrobial resistance and to encourage a comprehensive approach to infections in healthcare. All participants will receive the Certificate of Participation.

...The preferred means of improving antibiotic stewardship should involve a comprehensive program that incorporates collaboration between various specialties within a healthcare institution... There is now a substantial body of evidence that effective team-work in health care contributes to improve quality of care. Leading international organizations, acknowledge that collaborative practice is essential for achieving a concerted approach to providing care that is appropriate to meet the needs of patients, thus optimizing individual health outcomes and overall service delivery of health care. The use of such approaches reinforces the concept that each one brings with them their particular expertise and is responsible for their respective contributions to patient care...
